

Groundwater Monitoring

Groundwater contamination is a serious issue that can affect irrigation, drinking water, and municipal water supplies.

Monitor temperature, conductivity, chloride, blue-green algae, ammonia, dissolved oxygen, nitrates, ORP, Turbidity, total suspended solids and more.

Receive regular updates via long range GSM or Wi-Fi.

Use K, J, T, N, S, E, B and R-Type thermocouples connected directly to the ORB-X1 to measure temperature.

Connect a multi-parameter water quality sensor to the RS232 or RS485 port.

Monitor water pressure with a 4-20mA depth sensor.

Receive alerts if parameters change.
