

# Silo Level Measurement

- Monitor the level and volume of storage in your remotely located grain silos.
- Maximise the utilisation of silo capacity and product through reliable measurement.
- Real-time level or volume indication for supply and replenishment.
- One remote monitoring solution whether you use weight, ultrasonic, radar or laser measurement.

- Use the voltage input on the ORB-X1 to measure weight output from a load-cell.
- The serial and duty-cycle inputs on the ORB-X1 connect to most ultrasonic, radar and laser measurement systems.
- Receive real-time level and volume measurements.
- Set minimum and maximum warning and alarm levels for material levels and volumes.
